

Remodelling and Renovation of the Training Ctr., Altstetten

The renovation of the bank building dates back to 1975. Building A is going to be remodelled. The system and computer rooms on the ground floor and on the first upper floor will become offices and conference rooms. The facades on the ground and first upper floor will be redesigned. . The sheet metal facades and concrete elements will be removed to enlarge the window openings. New window elements made of aluminium profiles including sun protection will be installed. Replacement and design of a separate lobby area for new accessibility. On the 2nd upper floor, a partition system will be installed. Building B will be modified to comply with the latest state of building technology including the renovation of ramps and supports on the basement floor.
